🔗 SUMMARY

Full Stack Engineering Manager with 17 years in software and 3 managing engineering teams. At Johnson & Johnson I manage 5 direct reports inside an 11-engineer group spanning intern to coordinator, support ~70 contractors across 18 parallel initiatives, and still design and write the production systems we ship. AI across the team's planning, build and release cycle drove US\$1.2M in cost avoidance through July 2026. Outside it, I am the founder and sole engineer of a live habit-tracking app on iOS and Android, owning product, mobile, backend, billing and store releases end to end.

🏢 PROFESSIONAL EXPERIENCE

Johnson & Johnson

📍 São José dos Campos, SP, Brazil 📅 2014 — Present

Full Stack Engineering Manager

Apr 2023 — Present

- Manage 5 direct reports inside an 11-engineer group spanning intern to coordinator, plus ~70 contractors across the delivery org; accountable for hiring, leveling, career plans and the technical bar.
- Drove US\$1.2M in cost avoidance through July 2026 by applying AI across the team's planning, build, test and release cycle.
- Lead that program hands-on: spec-driven development, with SPEC.md, AGENTS.md and CLAUDE.md committed next to the code and reviewed like source, which is what speeds delivery up rather than the tooling alone.
- Support 18 parallel initiatives across the chapter through vendor management, budget ownership and technical direction.
- Design and write the production systems the group ships — TypeScript, React, React Native, Vite, Next.js, PostgreSQL, TypeORM, Docker, Python and LangGraph.
- Brought automated tests to every initiative the team owns, so nothing ships on manual verification alone — internal and partner squads held to the same bar.
- Promoted from chapter lead to manager in Sep 2023.

Technical Product Owner

Sep 2020 — Mar 2023

- Owned roadmap and delivery for personalization, SSO (OIDC/SAML), analytics and site search on the Innovative Medicine professional portal for LATAM.
- Defined the API contracts and non-functional requirements, and drove the reliability, performance and observability work behind them.
- Set OKRs and ran demos and executive readouts across LATAM markets.

Service Specialist — Digital & RPA

Feb 2019 — Aug 2020

- Main technical point of contact and escalation for regional digital initiatives.
- Ran automation proofs of concept with Blue Prism and Python, and set the delivery and QA metrics they were judged on.

📁 INDEPENDENT PRODUCT

Meus Desafios meusdesafios.com.br

📍 Remote — Brazil 📅 2026 — Present

Founder & Sole Engineer

- Founded and build a live habit-tracking app on iOS and Android — sleep, water, calories and exercise, with duels, private groups and weekly leaderboards.
- Own the whole stack alone: React Native and Expo on the client, Next.js and PostgreSQL on Vercel behind it, and the billing that separates the free tier from Premium.
- Every release ships behind a Maestro end-to-end suite, because with no QA function a regression reaches users through an app-store queue measured in days, not minutes.
- Build it with parallel agents in isolated git worktrees and headless runs for migrations and release checks — where I pressure-test the workflow before my team uses it.
- Make the product calls a PM would normally make — what stays free, what sits behind Premium, and what to cut to keep the surface small enough for one engineer to maintain.
- Run it deliberately at one-person scale — not fundraising, not hiring — which keeps me fluent in what my engineers deal with daily.

📁 PROFESSIONAL EXPERIENCE

Johnson & Johnson

📍 São José dos Campos, SP, Brazil 📅 2014 — 2019

Sr. Information Security Analyst

Apr 2018 — Feb 2019

- Security liaison for J&J Corporate, Vision Care and LifeScan across LATAM; guided risk posture and remediation.
- Led application-security assessments during M&A due diligence and integration.

Information Security Analyst

Jun 2015 — Mar 2018

- Ran application risk assessments and compliance reviews against corporate and regulatory standards.
- Led SOX testing for IT operations and partnered with corporate internal audit.
- Cut security training completion time in half by reworking the process; mentored interns.

Information Security Intern

Jan 2014 — May 2015

- Supported vulnerability assessment and remediation for J&J Medical LATAM web applications.
- Delivered security training to 800+ end users and guided secure coding practices for development teams.

<> EARLIER EXPERIENCE

Software Developer — Mentor Interativa (2011 — 2013). Built a learning management system in Java and shipped the company's first mobile app.

Junior Software Developer — Stefanini (2011). Migrated legacy Delphi applications to Java; added credit-card types to payment processing.

Teaching Assistant, Java — FAJTec — Faculdade Jaguariúna (2010). Supported the Introduction to Programming in Java course and authored its assessments.

Instructor — Data Computadores (2008 — 2009). Taught computer fundamentals, Windows configuration and Microsoft Office to entry-level students.
