🔗 SUMMARY

Full Stack Engineering Manager with 17 years in software and 3 leading engineering teams. At Johnson & Johnson I manage 5 direct reports inside an 11-engineer group spanning intern to coordinator, support ~70 contractors across 18 parallel initiatives, and still design and write the production systems we ship. Outside it, I am the founder and sole engineer of a live habit-tracking app on iOS and Android, where product, mobile, backend, billing and store releases are all mine.

🏢 PROFESSIONAL EXPERIENCE

Johnson & Johnson

📍 São José dos Campos, SP, Brazil 📅 2014 — Present

Full Stack Engineering Manager

Apr 2023 — Present

- Manage 5 direct reports inside an 11-engineer group spanning intern to coordinator, plus ~70 contractors across the delivery org — hiring, leveling, career plans and the technical bar are mine.
- Support 18 parallel initiatives across the chapter through vendor management, budget ownership and technical direction.
- Design and write the production systems the group ships — TypeScript, Next.js, PostgreSQL, TypeORM, Docker.
- Built the internal Next.js template other teams fork to start products, with Entra SSO, OpenTelemetry, Pino, CI/CD and security baselines in from the first commit.
- Lead the group's agent-assisted development program: specs and agent instructions (SPEC.md, AGENTS.md, CLAUDE.md) are committed and reviewed like source, so intent survives across sessions and hand-offs.
- Hold agent output to the human bar — a reviewer agent audits the writer agent's diff, and build, typecheck, lint and tests gate every change before a person approves the merge.
- Set the review and release bar that internal and partner squads deliver against, and hold both to the same one.
- Promoted from chapter lead to manager in Sep 2023.

Technical Product Owner

Sep 2020 — Mar 2023

- Owned roadmap and delivery for personalization, SSO (OIDC/SAML), analytics and site search on the Innovative Medicine professional portal for LATAM.
- Defined the API contracts and non-functional requirements, and drove the reliability, performance and observability work behind them.
- Set OKRs and ran demos and executive readouts across LATAM markets.

Service Specialist — Digital & RPA

Feb 2019 — Aug 2020

- Main technical point of contact and escalation for regional digital initiatives.
- Ran automation proofs of concept with Blue Prism and Python, and set the delivery and QA metrics they were judged on.

Meus Desafios · Independent consumer app meusdesafios.com.br

📍 Remote — Brazil 📅 2026 — Present

Founder & Sole Engineer

2026 — Present

- Founded and build a live habit-tracking app on iOS and Android — sleep, water, calories and exercise, with duels, private groups and weekly leaderboards.
- Own the whole stack alone: React Native and Expo on the client, Next.js and PostgreSQL on Vercel behind it, and the billing that separates the free tier from Premium.
- Every release ships behind a Maestro end-to-end suite, because with no QA function a regression reaches users through an app-store queue measured in days, not minutes.
- Build it with parallel agents in isolated git worktrees and headless runs for migrations and release checks — where I pressure-test the workflow before my team uses it.
- Make the product calls a PM would normally make — what stays free, what sits behind Premium, and what to cut to keep the surface small enough for one engineer to maintain.
- Run it deliberately at one-person scale — not fundraising, not hiring — which keeps me fluent in what my engineers deal with daily.

📁 PROFESSIONAL EXPERIENCE

Johnson & Johnson

📍 São José dos Campos, SP, Brazil 📅 2014 — 2019

Sr. Information Security Analyst

Apr 2018 — Feb 2019

- Security liaison for J&J Corporate, Vision Care and LifeScan across LATAM; guided risk posture and remediation.
- Led application-security assessments during M&A due diligence and integration.

Information Security Analyst

Jun 2015 — Mar 2018

- Ran application risk assessments and compliance reviews against corporate and regulatory standards.
- Led SOX testing for IT operations and partnered with corporate internal audit.
- Cut security training completion time in half by reworking the process; mentored interns.

Information Security Intern

Jan 2014 — May 2015

- Supported vulnerability assessment and remediation for J&J Medical LATAM web applications.
- Delivered security training to 800+ end users and guided secure coding practices for development teams.

🔗 EARLIER EXPERIENCE

Software Developer — Mentor Interativa (2011 — 2013). Built a learning management system in Java and shipped the company's first mobile app.

Junior Software Developer — Stefanini (2011). Migrated legacy Delphi applications to Java; added credit-card types to payment processing.

Teaching Assistant, Java — FAJTec — Faculdade Jaguariúna (2010). Supported the Introduction to Programming in Java course and authored its assessments.

Instructor — Data Computadores (2008 — 2009). Taught computer fundamentals, Windows configuration and Microsoft Office to entry-level students.

🔗 SKILLS

Build with

TypeScript

Next.js

React

Node.js

React Native / Expo

PostgreSQL

TypeORM

Docker

Microsoft Entra SSO (OIDC/SAML)

OpenTelemetry

Pino

Playwright

Maestro

Vercel

Python

Lead

Hiring & leveling

Career development

Architecture & technical direction

Code review standards

Roadmap & OKRs

Delivery & release management

Partner squad delivery

Budget Management

🎓 EDUCATION

Federal University of São Paulo (UNIFESP)

B.Sc. in Computer Science
2011 — 2015

DeVry — Metrocamp
Post-graduate, Information Security Management
2016 — 2018

🏆 CERTIFICATIONS

CompTIA Security+
2017 — 2020

SAFe® 5 Agilist
2020 — 2021

Blue Prism Developer
2020 — Present
